

ORIS

CERTIFIED PROOF™

*Simple and effective quality control for proofs,
proofing systems, press sheets and color displays*

Color Facts, Not Guesswork!

■ Establish Your Quality Standard

ORIS Certified Proof is the ideal color quality control system for multiple graphic arts applications. CMYK color bars for **SWOP, FOGRA, 3DAP and other standards**, including custom color bars, can be easily measured and evaluated on any proof output. The CMYK reference is specified by simply loading an ICC profile. To verify **spot colors** and other colors not available on standard color bars, you can create your own color set, selecting colors from **Pantone or HKS** spot color libraries – or define your corporate colors via Lab values.

■ Press Sheets and Monitor Colors

ORIS Certified Proof is not limited to proofing! In addition to Lab values, you can also measure density values, which allows you to check **press sheet quality** and control dot gain. With ORIS Certified Proof you can also **check the quality of your monitor calibration and monitor profile**, by measuring specific colors displayed on screen.

■ Reports, Long-term Control and Trend Analysis

Measurement results can be output as a brief summary printed on a label or as a detailed report sheet. All measurement results are stored and can be used for creating trend analyses. This allows you to detect quality variations over a certain period of time.

■ Benefits

- **Increased operational efficiency**, thanks to fast checking of color values and fast detection of color drift
- **Reduce costs and billing disputes**, by protecting you from misprints and customer complaints
- Makes **solid facts, not guesswork**, the basis for your industry standards compliance

The complete system includes the ORIS Certified Proof software license, a GretagMachbeth Eye-One spectrophotometer, and a Dymo LabelWriter. For those with existing measurement tools, a software-only version is available. Call or email today for more information!

From the CGS web site you can download A fully functional demo version (Mac or PC).
